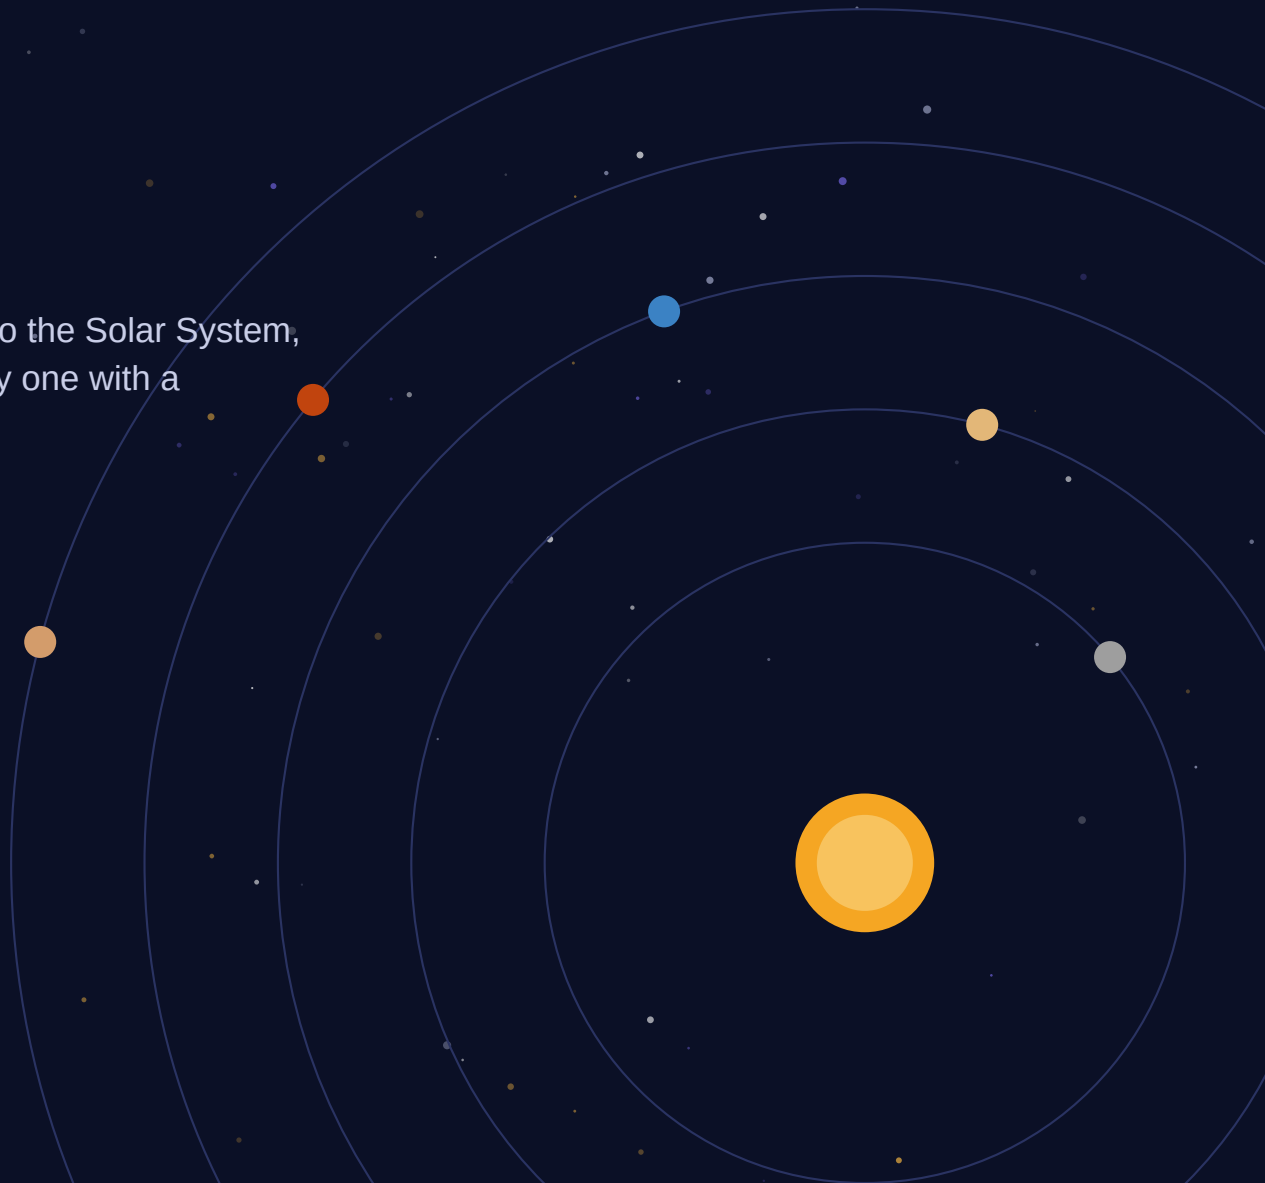
THE GALACTIC CANVAS

Information Architecture

Website structure for Stage 4: from the Milky Way, into the Solar System, and on to the Sun and each of the eight planets, every one with a Summary page and a Learn more page.



TOTAL PAGES
21

TOP-LEVEL PATH
Milky Way > Solar System > 9 bodies > Conclusion

CONTENT SOURCE
Stage 4 research compilation (8 planets)

Sitemap

From galaxy to planet in one continuous journey

HOW TO READ THIS

Solid boxes are primary pages visitors land on. Dashed connectors lead to the deeper Learn more page for each body. The Sun follows the Solar System overview, then the planets run in order of distance from the Sun. A closing Conclusion page follows Neptune.

PAGE COUNT

2	Intro pages (Milky Way, Solar System)
9	Summary pages (Sun + 8 planets)
9	Learn more pages
1	Conclusion page (after Neptune)

= 21 pages in total (2 + 9 + 9 + 1)

Page Templates

What appears on each type of page

Milky Way

Intro page

- Full-screen galaxy visual
- One-line welcome story
- Single call to action: enter the Solar System
- Optional marker: 'You are here'

Solar System

Overview page

- Clickable map or list of the Sun and 8 planets
- Quick reference table: distance, diameter, day, year, moons
- Story line teaser on hover for each planet
- Start journey button

Planet Summary

Pages 3 to 11

- Type, distance, diameter, day, year, moons
- Temperature and surface gravity
- Short overview paragraph
- Quick facts (5 bullets)
- Size comparison with Earth
- Moons at a glance box
- Learn more button

Learn More

Pages 3a to 11a

- Composition and structure
- Atmosphere and climate
- Orbit and rotation
- Discovery and naming
- Detailed moon table
- Exploration timeline
- Did you know? facts
- Website story line
- Back to summary button

NAVIGATION RULES

Linear path

Milky Way, Solar System, Sun, Mercury ... Neptune, Conclusion, with Previous and Next buttons on every page.

Learn more toggle

Each summary links forward to its Learn more page; Learn more links back to the summary.

Planet strip

A persistent header or footer strip of the Sun and 8 planets lets visitors jump anywhere.

Breadcrumb

Milky Way > Solar System > Planet > Learn more keeps visitors oriented at all times.

<- persistent planet strip

Content Map

Where each planet's research content lands, plus story-line teasers

PLANET	TYPE	DIST. (M KM)	DIAM. (KM)	MOONS	STORY LINE TEASER
Mercury	Rocky	57.9	4,879	0	*Scorched by day, frozen by night - the planet living at the edge of the Sun's fire.*
Venus	Rocky	108.2	12,104	0	*The planet that shows what a runaway greenhouse effect can do.*
Earth	Rocky	149.6	12,742	1	*A small blue oasis in the dark - the only home we know.*
Mars	Rocky	227.9	6,779	2	*A frozen desert that once had rivers - is it humanity's next home?*
Jupiter	Gas giant	778.5	139,820	95	*A planet so large it carries its own miniature solar system of moons.*
Saturn	Gas giant	1,434	116,460	146	*The ringed wonder - a planet so light it could float in a cosmic bathtub.*
Uranus	Ice giant	2,871	50,724	27	*The planet that tipped over - an ice giant spinning on its side.*
Neptune	Ice giant	4,495	49,244	14	*The planet found with a pencil - proven by maths before it was seen.*

ITEMS TO RESOLVE BEFORE LAUNCH

- The Sun has no content in the current research document. Its Summary and Learn more pages need new research or content from another stage.
- Moon counts (Jupiter, Saturn, Uranus, Neptune) keep changing. Verify against a current source such as NASA's Solar System site.
- Mission statuses (BepiColombo, Juno, planned missions) change over time; verify before final submission.

ONE CONTINUOUS JOURNEY

Start wide, then go deep.

The site opens on the Milky Way, narrows to the Solar System, and then lets visitors step through the Sun and each of the eight planets. Every body follows the same two-page pattern: a quick Summary to scan, and a Learn more page for those who want the full story.

Simple

Only 21 pages and one path, so nobody gets lost.

Consistent

Every planet uses identical Summary and Learn more templates.

Flexible

Linear Previous/Next plus a planet strip for jumping around.

NEXT STEPS

1. Write or source the Sun's Summary and Learn more content.
2. Verify moon counts and mission statuses against current NASA data.
3. Design the Milky Way and Solar System pages, then the two planet templates.

THE END
